

## Computing in EYFS

### Technology in EYFS

Children will explore Technology in the early years throughout the whole curriculum, they will have opportunities to actively learn about technology in their daily lives and use technology that will support their learning and development. Children are taught how to use different electrical devices safely with guidance and then encouraged to become more independent. Computing in the early years will allow children to begin to become digitally literate and participate in our digital world.

### To support our readiness we will:

- Discuss what technology is and where we can find it at home and in school
- Use the IWB during adult led sessions to complete activities linked to our learning.
- Through our Project Evolve sessions we will learn about keeping ourselves safe when using technology and online.
- Explore the world by using Google Earth to locate different places.
- Use technology when cooking throughout the year such as digital scales and timers.
- Use Barefoot resources as an introduction to algorithms.
